

Ceetec IS250

The Ceetec IS250 sanding machine has been developed according to the same concept as our painting machine series, where key words are flexibility, efficiency and simplicity.

Thanks to its fast and efficient adjustment, the machine is particularly well-suited to sanding mouldings, skirting boards, architraves and so on.

The boards are fed through the machine using an automatic forward drive system and speed is regulated via an un-graduated frequency converter. The speed of the sanding heads can be adjusted individually for perfect results.

The machine can, for example, be fitted with modular polishing heads that can be combined in infinite ways. The polishing segments can also be replaced without disassembling the axle and head.

Feeding speed is between 300 and 2000 metres an hour, and the machine can be set to sand all 4 surfaces simultaneously.

To sand and paint at the same time, the sanding machine can be mounted in front of the Ceetec A-250 painting machine – combining both processes in one procedure.

CEETEC PRODUCT PROGRAMME

ROLL FORMER 

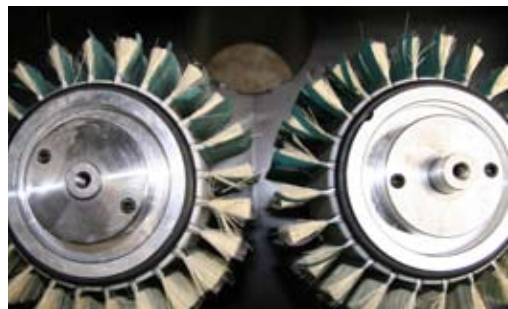

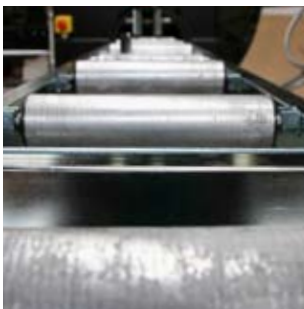

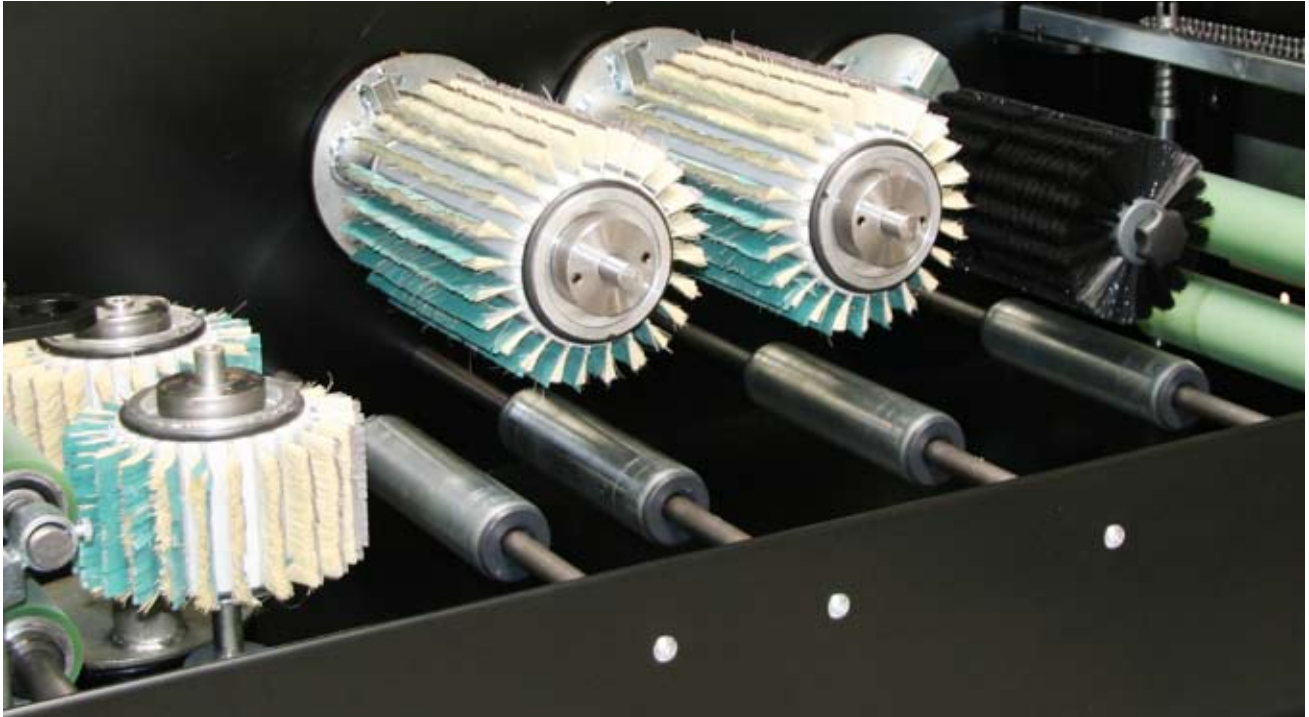

SANDING

Advantages of the Ceetec IS250

-  Automated sanding
-  Efficient sanding at up to 2000 metres per hour
-  Option for sanding on four sides
-  Can be combined with Ceetec painting machines
-  Small investment and fast pay-back time

Capacity

Up to 3600 metres per hour

Material dimensions

Max. H: 100mm x W: 250mm

Min. L: 800mm

Power connection

3 x 400 V + PE IP Class 54

Wattage: 0.75 kW

Machine weight

Approx. 250kg
